

Developing a Questionnaire

What is a Questionnaire?

- A tool for collecting information to describe, compare, or explain an event or situation, as well as, knowledge, attitudes, behaviors, and/or sociodemographic characteristics on a particular target group.

Questionnaire General Format

- Self-administered (by mail or personal contact)
- In person (face-to-face)
- Telephone interviews

The Questions or Items

- Are the focus on any survey or questionnaire
- It is crucial to know how to ask the questions in written and spoken form
- The way you ask the questions determines the answers

Questions Context

- Identify the questionnaire's specific purpose(s)
- Clarify the terms used to state the questionnaire's purpose(s)
- Be sure to have the specific objectives of the questionnaire
- Know the respondents

Questions Context

- Standardize the interviewer
- Standardize the response format
- Ask questions in a social, cultural, and economic context
- Keep confidentiality and voluntary participation
- Include a letter of introduction or presentation

Questions Format

- Open questions - more information but difficult to codify, enter, and analyze
- Closed questions - less information but easy to codify, enter, and analyze

Choices And Measurement Of Responses

- Nominal or categorical choices
- Ordinal
- Numerical

How To Obtain Valid Information

- Ask purposeful questions
- Ask concrete questions
- Use time periods based on importance of the questions
- Use conventional language

How To Obtain Valid Information

- Use complete sentences
- Avoid abbreviations
- Review questions with experts and potential respondents
- Use shorter questions

How To Obtain Valid Information

- Avoid two-edged questions
- Avoid negative questions
- Adopt/adapt questions used successfully in other questionnaires

Before the Design of Questionnaire

Your approach should take consideration of:

- Your topic
- Who you want survey
- The type of information you want
- Your budget
- How quickly you need the information

Questionnaire Design

- Questionnaire design is a systematic process in which the researcher contemplates various question formats, considers a number of factors characterizing the survey at hand, ultimately words the various questions very carefully, and organizes the questionnaire's layout.

10 STEPS

TO A GOOD SURVEY DESIGN

Procedure for Development

- Specify what information will be sought
- Determine the type of questionnaire and method of administration
- Determine the content of individual questions
- Determine the form of response to each question
- Determine the wording of each question

Types of Questions in a Questionnaire

- Open questions
 - more information but difficult to codify, enter, and analyze
- Closed questions
 - less information but easy to codify, enter, and analyze

Open-ended questions

- Help collect qualitative data in a questionnaire where the respondent can answer in a free form with little to no restrictions.
 - What are your expectations/ requirements for this product (**Information gathering**)
 - What do you see as the next action steps? (**Qualifying**)
 - What's the most important priority to you with this? **Why?** (**Establishing rapport**)

Close-ended questions

- They are a multiple-choice questions type in which a respondent has to select one (single select multiple choice question) or many (multiselect multiple choice question) responses from a given list of options.
 - Have you been stressed lately?
 - ☐ Yes
 - ☐ No

Types of Multiple Choice Questions

- Likert Scale

Likert Scale  					
	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
The website was easy to navigate	☐	☐	☐	☐	☐
The checkout process was simple	☐	☐	☐	☐	☐
The product(s) I received was/were what I expected	☐	☐	☐	☐	☐

Types of Multiple Choice Questions

- Checklist type

Which of the following would you like to see in the showroom :

- ☐ Sports Utility Vehicle
- ☐ Sedan
- ☐ Hatchback
- ☐ Convertible
- ☐ All the above

Types of Multiple Choice Questions

- Rank Order

Please rank the following toppings on a scale of 1 to 5, with 1 being your favorite.

3	Pepperoni
5	Anchovies
2	Mushrooms
4	Olives
1	Sausage

100%

- Rating Scale

[illegible]

Common mistakes

What might
be wrong
with this
question?

Need to cover
all options

What was the first drink you had
today?

- ☐ Tea
- ☐ Coffee
- ☐ Water
- ☐ Juice
- ☐ Haven't had a drink today
- ☐ Other (please state)

Common mistakes

What might be wrong with this question?

What is your age group?

0-18	18-30	30-45	45+
☐	☐	☐	☐

☐	☐
--------------------------	--------------------------

0-18	19-30	31-45	46+
☐	☐	☐	☐

Options should be mutually exclusive.

Common mistakes

What might be wrong with this question?

Options should be balanced

What did you think about the waiting time?

Excellent	Very good	Good	Average	Poor
☐	☐	☐	☐	☐

 'Good' responses

 'Bad' response

Common mistakes

What might be wrong with this question?

Use opt-out responses appropriately

How would you rate the appointment booking service using the:

	Good	Average	Poor	N/A
Website	☐	☐	☐	☐
Phone	☐	☐	☐	☐
Reception	☐	☐	☐	☐

Demographics

- Need to know how opinions and behaviors vary across different categories of people
- Such things as
 - Gender, age,
 - Income, education levels
 - Political beliefs
- Put at end of instrument
 - Easy to answer

Types of questionnaire

Self-Completed

- Respondents complete on their own
- Best designed for
 - Measuring variables with numerous values or response categories
 - Investigating attitudes and opinions not usually observable
 - Describing characteristics of a large population
 - Studying ‘private’ or ‘difficult’ behaviors

Self-Completed

- Closed-ended items limit the researcher
 - Adjust for differences in respondents
 - Clarify misunderstood items
 - Explain ambiguity
- Not suitable for all audiences
 - Young children
 - Visually impaired
 - Learning/reading disabilities

How To Obtain Valid Information

- ✓ Ask purposeful questions
- ✓ Ask concrete questions
- ✓ Use time periods based on importance of the questions
- ✓ Use conventional language
- ✓ Use complete sentences
- ✓ Use shorter questions

How To Obtain Valid Information

- ✓ Avoid abbreviations
- ✓ Avoid two-edged questions
- ✓ Avoid negative questions
- ✓ Adopt/adapt questions used successfully in other questionnaires

Words to Avoid in Questionnaire Development

- These words: **all, any, anybody, best, ever, every, never**, etc. are all **EXTREME ABSOLUTES...**
- They place respondents in a situation where they must either fully agree or they must completely disagree with the extreme position in the question.
 - *Do you always observe traffic signs?*
 - *Would you say all cats have four legs?*

Computer Assisted and Web-Based

- Way to create and administer self-administered questionnaires
- Marketing researchers find response rates increase
 - This is not across the board
- Questionnaires (especially short ones) can be sent via email
 - Or provide internet link to site which hosts survey
- Maybe less time and costs
- Access is a huge issue

Interviews

- Reading questionnaire items in a face-to-face or telephone situation
- Unstructured or in-depth
 - Suited for exploratory research
 - Either with one person or in focus groups
 - Open-ended items
 - Cannot standardize
 - Good for complex situations

Interviews

- Response rates tend to be highest with face-to-face interviews
- Issues
 - More time
 - Smaller samples
 - Higher cost

Telephone

- Most popular
 - Less costly
 - Less time
 - Less subjective to interviewer
 - As compared to face-to-face
- Often conducted with computers
- Can probe for information/clarification
- Threshold about 20 minutes

Constructions

- Regardless of survey type, construct in a way
 - Allows for candid answers
 - Accurately
 - Consistently
 - Addresses goals, hypotheses, research questions

Instructions

- Beginning of each section, should include clear instructions
- Disclose needed information for respondents to decide whether to complete the survey
- Tell whether
 - **Anonymous:** no names or IDs
 - **Confidential:** names or IDs, not attached responses

Instructions

- Give an information about questionnaire time
- Be consistent with instructions and format
 - A little variation might break up 'routine'
- Avoid ambiguity, confusion, and vagueness.
 - Make sure it is absolutely clear what you are asking and how you want it answered.
 - Avoid indefinite words or response categories.

Instructions

- Avoid asking questions beyond a respondent's capabilities
 - People have cognitive limitations, especially when it comes to memory of past events.
 - It is pointless to ask people about things that are not natural ways for them to think.

Online Surveying Platforms

- docs.google.com/forms
- freeonlinesurveys.com
- tr.surveymonkey.com
